Summary

Experience coordinating multi-entrance examination operations and managing a 25+ person team, with additional hands-on work building AI prototypes and analyzing customer feedback, model evaluation, and technical product scenarios. Brings strengths in operations, team coordination, structured problem-solving, and applied AI tools.

Selected Projects

ModelCompare | AI model evaluation prototype

- Built a prototype for side-by-side LLM response comparisons using configurable models and a consistent evaluation rubric.
- Framed model-selection uncertainty from qualitative user observation and defined model selection rate as the primary metric.

Voice-of-Customer Agent | AI MVP

- Built an MVP that ingests app-store reviews, filters and groups feedback, and surfaces recurring themes, user impact, and severity estimates.
- Designed a human-in-the-loop workflow that automates review analysis while keeping roadmap and prioritization decisions with the PM.

QuickBite Payment SDK RCA | Simulated case study

- Analyzed a simulated order-completion decline from 92% to 82%, isolated callback processing as the main anomaly, and proposed a phased release strategy.

Rapido Night Safety | Independent concept

- Designed a rider-safety flow combining driver verification, trusted contacts, live location sharing, and emergency SOS.

Experience

Center Manager, CET Cell | MSS's College of Engineering, Jalna | Mar 2026 to May 2026

- Coordinated examination operations and facility readiness for multi-entrance examinations.
- Managed and coordinated 25+ invigilators and support staff while maintaining examination protocols.
- Resolved candidate, logistics, and coordination issues in a high-pressure examination environment.

Education and Certification

Bachelor of Arts BAMU University | Graduated 2024
